

Reform Legislative Branch Operations

Enable synergistic legislation development

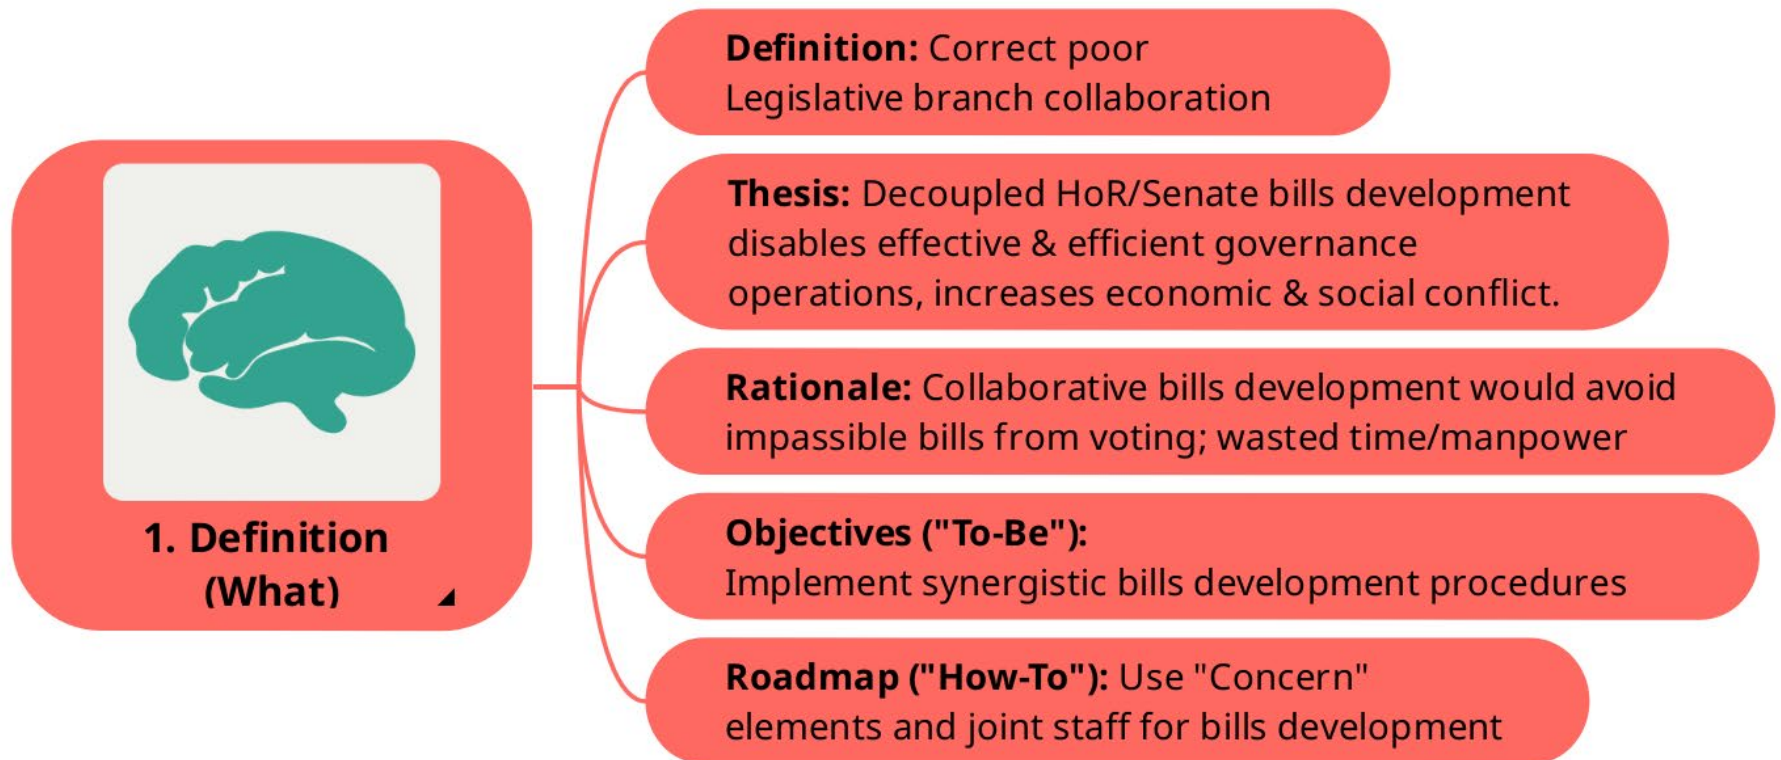

Concern Synopsis Up-Front

- **Concern definition: Poor current Legislative branch synergy** and performance in bills development
- **Current-State: Current ‘backward-collaboration’ procedures** typically use decoupled HoR or Senate bills development, hindering bill passage
- **Objective: Use defined “Concern” template and procedures forcing collaborative bills development** and cohesive information flow among all stakeholders
- **Use “Concerns Dashboard” for public awareness of Legislative branch actions and transparency**
- **Roadmap: Task a Joint Legislation Staff for collaborative bills development** prior to HoR or Senate voting:
 - Establish a Joint bills-development staff to develop bills collaboratively prior to their availability to HoR or Senate voting
 - Develop “Concerns Dashboard” for Legislative branch comprehensive and individual concern and bills development awareness
 - Identify “Centers of Gravity” concerns to scope bill-content realistically using Subject Matter Experts project teams to construct legislation

Definition

- Current parallel (HoR & Senate) bills development without cohesive development incapacitates constitution mandated dual bill-passage
- Requiring collaborative development procedures would necessitate methodical (to replace ideological) operations & enable effective governance
- Using defined “Concern” (challenge or opportunity) would enable cohesive information flow and joint bills development

Current State

- Current poor bills development procedures disable bill passage, operations transparency, empowers ideological governance and enables deceiving information distribution; effectively disables operative governance

2. Initial-state Attributes (As-Is)

Procedures require 'backward-collaboration' from decoupled HoR/Senate bills development & passage

Lacking prioritized and productive leadership; Ideology & social activism primary bills drivers

Bill content & derivation unknown/misinformed to public

Inaccurate, deceiving, incomplete info distributed: Journalism, activist, entertainer, educator, showmanship-politician provide

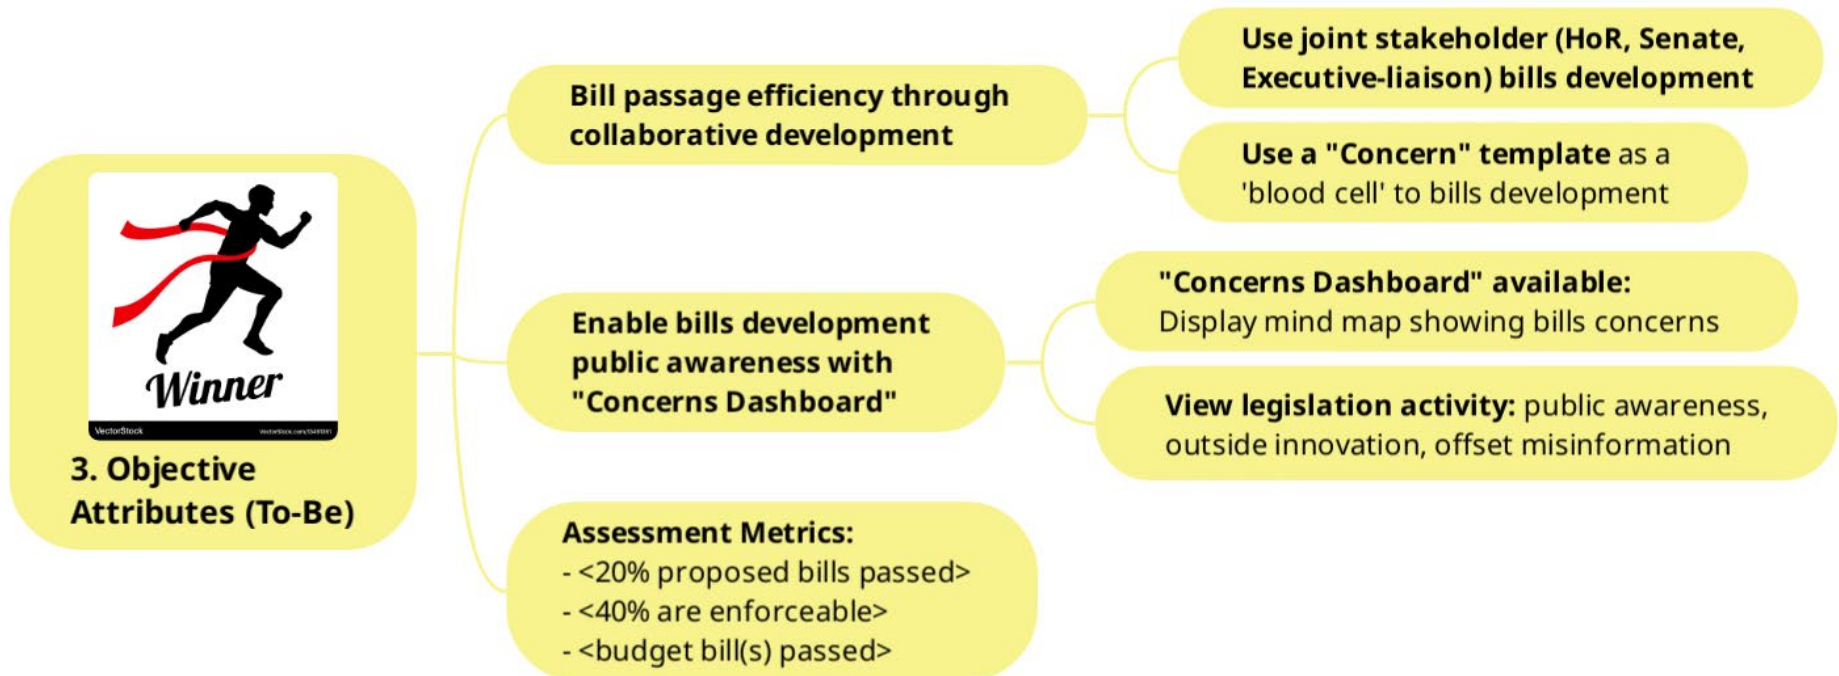

Small percentage proposed bills passed

As-Is metrics examples:

- Thousands proposed bills, 27 passed in 2023
- Last on-time budget bill passed 1996, 4 passed in 40 years
- Legislation focus: Social activism (e.g., sexual preference, CRT, DEI, abortion, student loan forgiveness) vice government ops
- Political video hearings & distribution primary Branch visibility

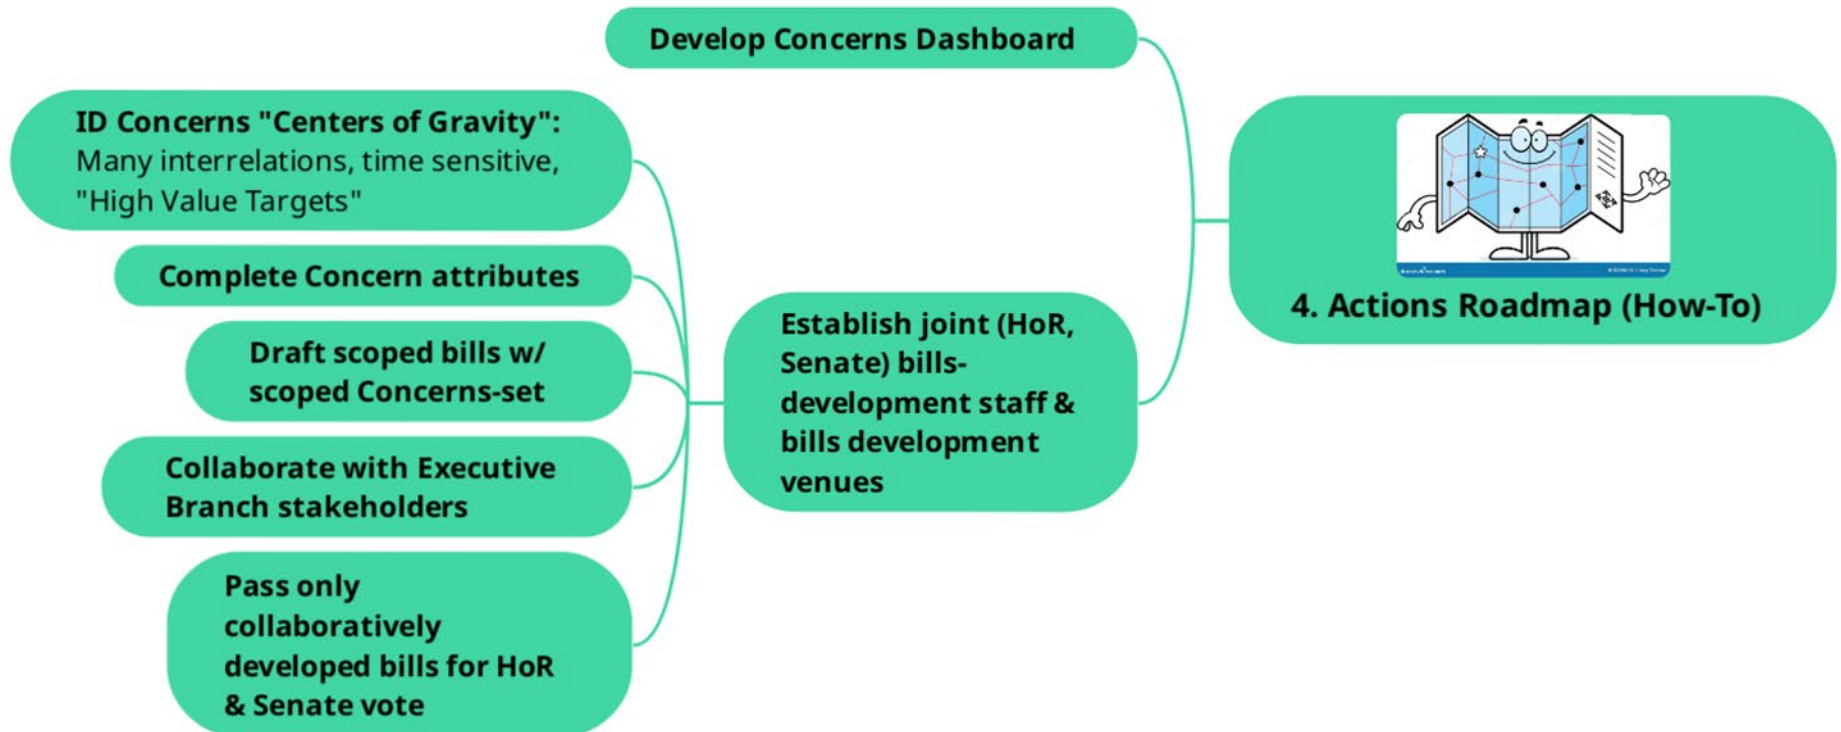

Objective Attributes

- **Require Joint bills development** prior to voting in HoR or Senate
- **Use "Concern" as cohesive information distribution element** for structured legislation development
- **Create "Concerns Dashboard"** for public Legislative branch activity transparency and offsetting inaccurate indoctrination and propaganda effects
- **Enable tracking and assessing legislation metrics**, legislative branch performance, concerns validity and efforts prioritization
- **Enable outside element ingenuity** to address and solve problems without government actions

Actions Roadmap

- Develop a roadmap towards moving from current concern-state ('As-Is') to objective concern-state ('To-Be')
- **Establish a Joint HoR & Senate staff** to:
 - Focus on concerns roadmap development construction
 - **Identify "Centers of Gravity" concerns; pinpoint interconnected concerns needing priority effort**
 - **Convert scoped concern elements into legislation** using integrated Subject Matter Expert teams to:
 - **Limiting a bill's scope will be key** to constructing effective products

Synopsis

- The synopsis provides an abbreviated view of the Legislative branch performance shortfalls and proposed operations changes to repair those shortfalls
- Current **performance issues are caused by inadequate procedural collaboration**
- The solution involves forcing HoR & Senate to:
 - **Outline legislative actions in a generic “Concern” format** defining needed actions,
 - **Provide open transparency** to legislation or oversight development efforts,
 - **Force effective collaboration** by mandating use of a collaborative legislation development and maintenance methodology

Poor current Legislative
branch duties synergy

Use Joint Legislation staff for
collaborative bills development

Use "Concern" as bills
development template

Use "Concerns Dashboard" for
bills development transparency

Key points
Summary

5. Synopsis

Assess/Validate

- A key point not focused on in this briefing but another key component to legislation reaching its objectives is to:
 - Prove effectiveness, make legislation changes, or delete legislation based on an assessment of 'current-state' performance assessment
 - Conduct other actions such as Executive branch oversight actions needed due to lack of action
 - Assessments should be components of a bill based on Objective ('To-Be') metrics such as standard economic data reports, a legislation enforceability based on 'time in effect', or defined legislation milestones

Define current-state To-Be attributes: No change

Assess To-Be Assessment Metrics: No change

6. Assess/Validate
